Leap Great

CUSTOMER SUCCESS STORY

How a Global Energy Services Leader Transformed Its SAP S/4HANA Rollout with LeapGreat's FrontLoad™ Approach

When a leading Global Energy and Infrastructure service provider began its SAP S/4HANA transformation, the stakes were high. As a major division of a global group specializing in multi-technical services for energy, industrial facilities, and public infrastructure, the organization needed to harmonize operations across several countries, including Germany, Hungary, Poland, and Switzerland.

The program initially leaned heavily on conceptual planning, producing hundreds of pages of documentation. However, without a tangible operational model, stakeholders lacked clarity—slowing decision—making and delaying alignment.

Introducing the FrontLoad™ Approach

To overcome this stalemate, the team introduced foundational elements of the LeapGreat's FrontLoad™ approach. This methodology emphasizes early operational exposure by building and delivering a functioning system tailored to the client's scope and data within weeks.

Shifting from planning to hands-on system interaction enabled:

- Immediate identification of process improvements
- Clear alignment across business and IT stakeholders
- A path forward that prioritized execution over further theorizing

This early operational exposure empowered business leads to directly validate workflows, confirm fit-to-standard decisions, and build confidence in the transformation path.

For more information on how the FrontLoad™ approach can benefit your organization, visit our website: www.LeapGreat.com or watch the 3-minute video walkthrough of this case study.

The FrontLoad™ approach transformed the organization's SAP S/4HANA implementation by:

- Reducing the risk of costly rework
- Accelerating progress toward an aligned, executable plan
- Providing system clarity early in the project lifecycle

This experience helped shape what is now the LeapGreat platform: a structured and automated method for putting a working system in front of transformation teams early—before major commitments are made.

For enterprise architects, CIOs, and CTOs, this leading European energy and infrastructure services provider's experience underscores the value of early operational exposure in large-scale SAP S/4HANA transformations. The FrontLoad™ approach offers a more modern methodology that prioritizes execution, reduces risk, and accelerates progress. By adopting this approach, organizations can navigate complex transformations with greater confidence and clarity.
